BASIC-ABSTRACT:

NOVELTY - A device for protecting a display part of a washing machine is provided to protect the display part including an LCD(Liquid Crystal Display) from an external force and the humidity by enclosing the display part with a protection casing, thereby improving the reliability of the washing machine.

DETAILED DESCRIPTION - A device for protecting a display part of a washing machine includes a protecting casing(50) formed of transparent synthetic resin for surrounding a display part(30) mounted on a controller manipulation part, wherein the protection casing includes a plurality of coupling hooks(52) at a lower end part to be coupled with a PCB(Printed Circuit Board;40) mounted to the controller manipulation part.
